## Reiki Energy

We are in the midst of yet another great phenomena. The universal energy that was promised upon humanity any year now for thousands of years has been with us all along. This energy should not be a surprise to Reiki beneficiaries and practitioners. If we owe our existence to higher and better energies, it is then possible for such energies to be in our own neighborhood.

It has come to pass that yours truly has now been empowered to Reiki Level One. As they say in the Reiki vernacular, I've been attuned. The greatest part about Reiki is that it resonates with so many philosophies, religions, theories and practices, including Pythagorean geometry, shaman and Pagan practices, and at times physicians.

In the Buddhist tradition the intent is paramount. Similarly, Reiki does not make claims of a cure but makes claims of the proper and beneficial intent toward the well being of the person in treatment. To keep Reiki in its beneficial potency, one does not have to prove that Reiki cures this of that disease, but, instead, Reiki keeps its focus on having its intent clear and clean.

In the Pythagorean tradition the Pythagoreans are discouraged to pray for specific benefits. The idea is that the person does not really know what is best for him or her. In fact, a case can be made that diseases result from wanting and getting only what we want -- while the exclusion of many other things takes us out of balance. Reiki energies do not work in mysterious ways but the treatment may not always follow a direct path. A change in food preferences may be a result that the Reiki practitioner could not even anticipate. Reiki practitioner, then, does not make a recommendation that he or she thinks would benefit the patient.

Reiki tradition comes from Japan via a single person: Mr. Mikao Usui. Much controversy surrounds such an important discovery and while Mr. Usui likely earned plenty of credits for a doctorate, my preference is for keeping the man the way he was in Japan and not bestow upon him the degrees of institutions with which he did not have much in common. Reiki literature I read refers to him as Dr. Usui, yet I cannot help but keep the institutions of state out of his provenance. A person is to be appreciated for his accomplishment while credentials are but a small part in one's life. In fact, the diploma that confers a

## Reiki Energy

PhD upon a person is quite different from an attunement. The spiritual blessings of persons skilled in art are not only different and unique but are likely much more potent than a diploma.

One can make a case that healing is the cornerstone of any religion, yet the healing power of various Western religious personalities are "elevated" into the miracle category and purposefully taken out of the practical and everyday reach. Reiki started that way as well. Symbols and signs of empowerment were put into safekeeping -- along with the appropriate secrecy provisions. Yet, Reiki made an unusual jump to the US via the island of Hawaii during the second war and took root here ever since. This is not to say that since Reiki is in the open, it is "out of the bag" and not subject to corruption. Reiki practitioners and beneficiaries are the ones who will keep Reiki in its most healthy and robust state.

Reiki is important for many reasons but the two most important ones are you and your kids. You and I do not mind if a person spends his money on horse racing or cigarettes. Spending money on drugs -- the legal kind -- is also oftentimes perceived as beneficial. You and I can understand that for one reason or another a person gambling his money away is just "out of it," but once you are exposed to Reiki you begin to see that spending money on drugs, surgeries, and physicians can be just as stupid as throwing the money away through many and various vices. The idea is not in the argument: "And what would you do if you were in an accident?" because such question diminishes in relevance once you begin to benefit from Reiki. Arguing with a Reiki skeptic is in the same category as arguing with an addict, for their world contains causal deficiencies that they themselves are responsible for. After you become empowered by Reiki, you may arrive at a conclusion that physicians do not have your cure in mind -- either through ignorance or through design -- but now you are not a victim twice over. The good news is that you will not have a physician operating on your wallet. Even better news is that you will be genuinely healthy. The best news is that your kids will be healthy. Oftentimes, there is a horror story a family may have -- just ask: a story of a medical "misdiagnosis," many operations, and death.

The TV shows or the radio shows that talk about "raising money for a cancer cure" are, to Reiki beneficiaries, in the category of disempowered or enslaved individuals who not only succumbed to propaganda, but who also dragged their own children with them down the black hole of ignorance. The AMA is a monopoly. Since the 1930s, AMA is actively pursuing the policy of eliminating the cure from its mission. AMA is the sole licensee of the word 'cure,' and they are busy keeping it from everybody else's use. It is easy to say that Reiki practitioners who work in hospitals or in medical clinics have betrayed the trust and the intent of Reiki because by the association with the AMA they are subscribing to withholding the intent to cure. In the long run the beneficiaries of Reiki treatment will be the ones who will provide proper feedback. It can be expected that Reiki practitioners who work without a tie in to the AMA will in the end have a better success rate. Reiki practitioners who work out of a neutral office or travel to treat their clients will be able to leverage the clear intent of doing the best for their clients. There is a difference between waving hands and treating with Reiki.

The path to becoming a Reiki practitioner is open to you. This path does not have only the mundane incentives the likes of saving money and having a healthy family, even though these are there. Reiki is about those things money cannot buy.

## Reiki Energy

Reiki energy could be a nebulous term on par with saying 'good energy.' There are several 'Reiki' interpretations and translations from Japanese, while each practitioner puts his or her footnote on what Reiki energy is and what it can do. So, here is our assessment that is in the context of this site's virtual energy: Reiki energy is intelligence in its virtual, or intangible, form. At times a word 'vibrations' is used and this is a fine description once the person appreciates that vibrations exist in unbounded octaves, in infinite spatial dimensions, and in infinite geometric formations. As a Pythagorean, you would appreciate that only the geometric formations facilitate tractable solutions. The most important appreciation is that the virtual energy has degrees of intelligence and not just a magnitude of 'less' or 'more' energy. An additional aspect assigns certain priorities to the virtual domain because the knowledge in its virtual form creates structures in its physical, or real, form. Having said that, and departing a bit from the Buddhist view, the real structures -- on account of acquiring certain physical shapes and geometries - - intercept and modulate virtual energies that would otherwise just pass on through. The intent, then, is also one of the constructs that exists geometrically in your mind.

At times, funny or unusual things happen when you get attuned to Reiki and the best way of dealing with it is to write as short a poem as possible:

In a closed hand  
I hold all things that are,  
In an open hand  
I hold all things that will be
